A: The values in your PHP are the default values given in the documentation for the WordPress plugin. There are probably 10 values total in that document and you should be able to retrieve them with the below. function get_icons($sel, $format, $shortcode_tag) { global $icons; return array_intersect_key($icons, array_flip($format. $shortcode_tag, array('post', 'page', 'image', 'video', 'link', 'quote', 'audio', 'header', 'gallery', 'chat','status','source', 'footer', 'widget', 'featured_media', 'custom-header','sticky', 'archive','menu', 'page_attributes', 'nav', 'post_attributes', 'content_attributes', 'post_class', 'jetpack-dialog', 'jetpack-user-info', 'jetpack-subscriptions'))); } echo get_icons('post', 'icon-theme', 'ic_page_48px_32px')[0]; echo get_icons('post', 'icon-theme', 'ic_author')[0]; Q: Operator "=" can only appear in a constant expression I am trying to define an int array using a string array. While it is fine if i use the code shown below, if i use the one i have shown below it throws an error. if(s="hello" || s="Howdy") A: You need to enclose the strings within single quotes and concatenate those into a long string literal: if("hello" || "Howdy" == s) There is no string concatenation operation || that takes two strings as operands. The compiler is warning you that you are invoking undefined behaviour by attempting that. Instead, use string.concat() to concatenate a string into a longer one. if("hello" + "Howdy" == s) If you want to use an int array, instead of a string, you need to first convert it to a string: if(s.indexOf("hello")!= -1 || s.indexOf("Howdy")!= - f678ea9f9e
